Environmental Resources Branch

Dear Fish Facility Design Review Work Group Members and Interested Parties:

Please find enclosed the draft 90% report titled, "The Dalles Fish Water Turbines Phase 1A Report".

The purpose of this Phase 1A project is to evaluate alternatives and identify recommended work to improve reliability of the Fish Water Units 1 and 2 and associated ladder system as well as the overall operation of these systems at The Dalles Dam. These units are located adjacent to Main Unit 1 at the powerhouse and are the primary source of attraction water for the Oregon shore fish ladder.

Your review of the draft report is very important. The comment period is now open. You may send your written comments to Jon Rerecich at jonathan.g.rerecich@usace.army.mil or call 503-808-4779 by June 15, 2018.

Thank you for your continued participation in the Fish Facility Design Review Work Group.

Sincerely,

A handwritten signature in blue ink, appearing to read "Joyce E. Casey", is written over a blue horizontal line. The signature is stylized and cursive.

Joyce E. Casey
