**RE: YN Request for Access on the John Day Dam Project**

Dear Mr. Kevin Moynahan,

Yakama Nation Pacific Lamprey Project staff would like to request access on John Day Dam to collect juvenile Pacific Lamprey to be used in an acoustic telemetry project in Lower Yakima River and mainstem Columbia (McNary Dam). The project was funded primarily by Yakama Nation Fisheries, Bureau of Reclamation, and local irrigation districts. USGS and PNNL are also key partners for this study. This study will be the second study that will be using the newly developed lamprey/eel tag for monitoring Pacific Lamprey juvenile passage, following PNNL's first pilot study in 2017.

The full duration of John Day Dam access is anticipated to be between April 15 and June 30, 2018 (but primarily between May 1 and May 30, 2018). The purpose of this letter is to describe the study objectives, the anticipated activities, and needs at John Day Dam project. \*Note: This request is the backup plan in the event that the number of lamprey required for this study cannot be collected via the juvenile fish monitoring facility at Chandler Diversion on lower Yakima River.

This study will be similar to others conducted throughout the Snake and Columbia rivers to estimate survival and passage metrics of juvenile salmonids using acoustic telemetry technology. The primary goal of this study is to evaluate passage of juvenile lamprey through Lower Yakima River reach (through Wapato, Sunnyside, Prosser, and Horn Rapids dams and diversions) and mainstem Columbia River (between mouth of Yakima River and McNary Dam).

Yakama Nation staff will need access to the John Day Dam juvenile fish facility from April 15 to June 30, 2018, to transfer collected juvenile lamprey from the facility and then transport to Yakama Nation Prosser Hatchery. We would need to collect up to 130 juvenile lamprey which have a minimum length of 140 mm (once we secure the target number of fish, we will be done for the year). Collected fish will be transferred to a large cooler / fish tote supplied with air for the

Post Office Box 151, Fort Road, Toppenish, WA 98948 (509) 865-5121

trip to Prosser Hatchery where the tagging will be done. Once fish are transported safely and accounted for, then Yakama Nation personnel would immediately leave the Project for the day. We have our Yakama Nation Scientific Fish Collector's Permit for this work and other required permits will be obtained as needed.

The Yakama Nation point of contact for this study is Ralph Lampman (509-388-3871 [cell]). Fish collection plans have been previously discussed with Ricardo Walker (Portland District USACE; 503-808-4709) and Steve Junke (Portland District USACE; 503-808-4709). We will also contact Miroslaw Zyndol (John Day Fisheries Research Coordinator; 541-506-7860) and Tammy Mackey (District Fisheries Biologist). Yakama Nation Fisheries will work closely with the John Day Dam Project Biologist, Project OPM, and project staff to minimize our impacts on project operations and maintenance activities. We have extensive experience working on Columbia River dams and understand the value of coordination with the project.

Additional pre-project documents requested by the John Day Dam project to include a schedule, safety plan, study plan, impacts to the project, access requests, collection permit, and a list of Yakama Nation personnel will be packaged together and provided to Tammy Mackey prior to the start Yakama Nation activities on John Day Dam related to this study.

Thank you for considering our access request. Please contact me if you have any questions.

I will be contacting and coordinating with ACE to ensure that our participation in this activity complies with project standards for security and safety. I look forward to working with you to complete all necessary steps in a timely manner and thank you both in advance for your help in completing this important work.

Best Regards,
