### **SECTION 4. Facility Operations**

Condition Monitoring at John Day Dam is currently sampling Mondays and Thursdays since daily average river water temperatures have reached 70 degrees F in the John Day Dam forebay. Sampling will return to Mondays, Wednesdays, and Fridays once daily average river water temperatures fall to 69.5 degrees F. Samples will be taken from the Juvenile Bypass System between 0700 and 1300 hrs. and the Condition Exams will target approximately 100 out-migrants. All river flow, powerhouse, spill, and index estimates are based on the sample period only. Debris at the separator bars was low for the week and consisted of adult American shad, bryozoans, freshwater sponges, a few small sticks, and aquatic vegetation.

### **SECTION 5. Research**

No Pacific Lamprey macrophthalmia or ammocoetes were sampled this week.

## SECTION 6. Pictures

Banded Killifish (*Fundulus diaphanus*), approximately 65 mm total length, similar to a specimen sampled at the John Day Dam Smolt Facility on 2 April, 2024.

Pacific lamprey ammocoete on top and Pacific lamprey macrophthalmia (*Entosphenus tridentatus*) on bottom, both sampled at the John Day Dam Smolt Facility on 17 May, 2019.
