## John Day Dam Smolt and Juvenile Lamprey Condition Monitoring

Weekly Report, #24-20 Report Period: 8/10 – 8/16, 2024

Prepared By: Gregory Kovalchuk

### SECTION 1. River Flow and Sampling Results

	Min	Max	Mean		
			Current	Last Week	2023
A. River Flow	96.0	118.5	107.3	104.5	120.0
B. Powerhouse	73.1	96.7	84.9	81.7	86.6
C. Spill (kcfs)	20.6	21.1	20.9	21.1	31.6
% of River Flow	17.4	22.0	19.7	20.3	26.3%
D. Water Temp *	71.1	71.5	71.3	71.2	72.6
E. % Saturation *	103.6	0.0	104.9	106.3	107.4

Note: Data is for the sample period only (0700 - 1300 hrs).

### SECTION 4. Facility Operations

Condition Monitoring at John Day Dam is currently sampling Mondays and Thursdays since daily average river water temperatures have reached 70 degrees F in the John Day Dam forebay. Sampling will return to Mondays, Wednesdays, and Fridays once daily average river water temperatures fall to 69.5 degrees F. Samples will be taken from the Juvenile Bypass System between 0700 and 1300 hrs. and the Condition Exams will target approximately 100 out-migrants. All river flow, powerhouse, spill, and index estimates are based on the sample period only. Debris at the separator bars was low for the week and consisted of adult American shad, bryozoans, freshwater sponges, a few small sticks, and aquatic vegetation.

### SECTION 5. Research

No Pacific Lamprey macrourhthalmia or ammocoetes were sampled this week.

## SECTION 6. Pictures

Juvenile Common Carp (*Cyprinus carpio*), approximately 90 mm total length, sampled at the John Day Dam Smolt Facility on 19 August, 2024.

Subyearling Fall Chinook smolt (*Oncorhynchus tshawytscha*), approximately 120 mm fork length, showing scars from a fish predation attempt, similar to a specimen sampled at the John Day Dam Smolt Facility on 12 August, 2024.
